PROFESSIONAL SKILLS AND INTERESTS

- **JavaScript, TypeScript and Node**
- **React.js and Redux**
- **MongoDB and PostgreSQL**

- **Advanced CSS and Sass**
- **Troubleshooting and multi-tasking**
- **Git and Github**

PROFESSIONAL SKILLS DEMONSTRATED

[INVERDATA SOFTWARE & TECHNOLOGY](#)   May 2021 – August 2021

A private company with ~10 employees dedicated to the development and implementation of administrative, HR and biometric software packages.

Front-end Developer *(Internship)*

My job was to redo an existing software for a sale of property website made with Angular.js and Django. I had to design and develop a new front-end programmed with React.js using the UI library AntDesign.

- **React.js, TypeScript and Node:** Successfully managed to create a new front-end using React.js with a TypeScript template to avoid bugs and make JavaScript code easier to read. I also implemented AntDesign to create a high-quality UI.
- **Jira:** Created a Kanban board to established all the tasks needed to complete the front-end of the application on an organized and systematic way and properly manage the entire project.
- **Git and Sourcetree:** Using Sourcetree for a visual representation of the Git repository, I uploaded all the changes made to the application in relation with the tasks established at the beginning of the project.

OPEN SOURCE

[Carzone Project](#)

Back-end Developer

Personal project made with Django framework, PostgreSQL and a bootstrap template. Fully functional website for a car concessionary with user login (facebook and google login included), register, authentication, administration panel and sending of emails. Deployed to Heroku.

[DevConnector Project](#)

Full Stack Developer

Personal project made with MERN Stack. Fully functional web application for developers with login, register, posts, comments, likes, repos from Github, profile creation and more. Deployed to Heroku.
